

Boy, what a start for the new year!

It started off with a bang, with gold jumping to \$900 an ounce. And staying there.

We've hired more people on and taken on more space to try and keep up with the demand for equipment and supplies. Fire assays are currently running about 1 week out and ICPs are running about 6-8 weeks out. Please keep this in mind when you send in samples.

Ian Freeland, our Australian rep, has been very busy as well 'down under'. Mining is booming, pardon the explosive pun...

NEW portable Screen Basket Unit for Micron Mill Wave

NEW

Tables

It is important to classify your material before feeding to the M7/M8 tables (true for any concentrating table), but sometimes a small amount of over-sized material doesn't justify an independent screening unit. That's where a removable screen would come into play!

Now by popular request, we have available a removable screen basket that fits snugly in the feed trough of the M7/M8 tables. The metal frames are siliconed and sealed to prevent wear factor inside the trough.

MINEXPO 2008 -Mark your calendar.

Every 4 years, the American Mining Congress holds their convention in Las Vegas Nevada - the largest mining show in the world! Please visit our booth #2246 if you're planning on attending, Sept. 22-24, 2008.

www.minexpo.com

2008 CATALOG

Our new catalog is available now. To keep our costs down, we do not send them out in a bulk mailing. Please call 800 624-1511 or write us and we'll be happy to mail it out or include it with your next order!

Pivot clamps are provided to hold the basket in place.

Simply run your material for as long as possible; then 1) easily remove the basket, 2) dump out the oversized material, 3) reposition the basket and start up the table again!

Made to order with screen mesh size requested by customer. [Cat#TABLESCREEN](#) \$225.00

NOW AVAILABLE - M7 OR M8 IN A SHORT LEG FORM!

You now have the option of ordering the [M7](#) or [M8](#) with a short leg pattern. For the overseas customer, this means a smaller dimensional weight factor & less

freight dollars spent. For customers who have a space problem, the shorter system may be the ideal answer. The short version must still be bolted to a slab or heavy platform. The M7/M8S operate exactly like the standard M7/M8 units - all parts & specs are the same. The short units have a working height of 19". Crated dimensions are 66"L x 36"W x 24"H; weight 365 lbs.

Optional Leg Extensions for the M7S or M8S

This frame setup consists of separate leg frames with welded steel inserts having bolt patterns on each section that match the legs on the M7S or M8S. The frames can be bolted together on-site to raise the table up to the standard working height of 33". The leg extension have inserts for securing the table to the slab.

M4 DISCONTINUED - NEW M5 COMING SOON!

Watch for the

Celebrating 29 years
in the mining industry!

announcement and more details on our new M5 Micron Mill Wave Table to be launched this summer. While still running on a 12 volt system, it will have components similar to our larger models and will look more like the M7/M8 models.

NEW NEW GRAM SCALE!

Take a look at this amazing easy-to-use pocket-sized gram scale now included with our Assay Kits, replacing the counter-balance Assay Scale. Capacity 500 grams, readability 0.01 grams.

Best thing - price! Only \$64.95. Unbelievable, I love it!

WE RECYCLE!

We do our 'green' part by recycling boxes when they are still in good condition, using the newspaper for packing, and recycling other packing products. Of course, our chemicals & products are new, unless stated and sold as "used".

Please do your part, by disposing of any chemicals or mining materials in the proper manner. If you are unsure as to the procedure, check the following web site <http://www.msdssearch.com/DBLnksN.htm> for the Material Safety Data Sheet (MSDS) or feel free to call us. We will be happy to provide you with the MSDS on a particular chemical.

SOME LOWER PRICES!

Believe it or not, a few items have actually gone down in price. Well, not really. It's just that our buying power has improved pricing, (like with test lead and roasting dishes). They're noted in the catalog.

BIGGER SIZE CRUCIBLES AVAILABLE NOW!

We now have 45 gram clay crucibles in stock. These are 6" h x 3.5" w. Order individually, box of 16, or box of 48.

LITHARGE & OTHER SUPPLY PRICES RISING!

We just got word that the price for litharge is going up again - for the 5th time in the past year! We tried some from China, but the quality was not consistent. So we have stuck to our South African product to ensure quality.

A few other chemicals are rising as well, but not as fast as lead products. We have a good amount of stock in inventory, so think about ordering extra now!

Crucibles & cupels went up in price last year for the third time this year. We have them available if you want to stock up.

SPRING SPECIAL!

With the purchase of the Beginners Assay Kit (or Professional Kit), you will receive our **Fire Assay Home Study Course and DVD Bundle (\$99 value) for FREE. Mention promo code "Video Bundle".**

See below for detailed description of promotional feature.

DVD/BOOK Bundle! "Investigating & Understanding Fire Assaying" (DVD) \$79.95, an in-depth 2½ hour introduction to assaying standard oxide ores and sulfides ores, with actual demonstrations of each. **Fire Assay Home Study Course (BOOK ONLY) \$29.75.**

Bundle price \$99

Mention promo code "Video Bundle".

A very nice letter from one of our customers!
"I honestly do not know what I would do without you folk. All the old timers have disappeared and the big outfits are not interested in the small finds we look for and exploit. I kind of feel like the small business guy going into the big bank for a bank loan and gets ill treated. You people are my "Capitol One" on mining. We thank you and appreciate you very much." Butch We certainly appreciate all our clients - big & small!! Thanks from all the staff at Action Mining.
